

Transportation Advisor

When you are shipping a regulated or potentially regulated substance:

Wouldn't it be great to view the pertinent shipping instructions in an easy, organized manner?

Wouldn't it be even better if you could retrieve information for a single substance across a variety of regulations covering air, sea, and land transportation, rather than having to look up each one individually?

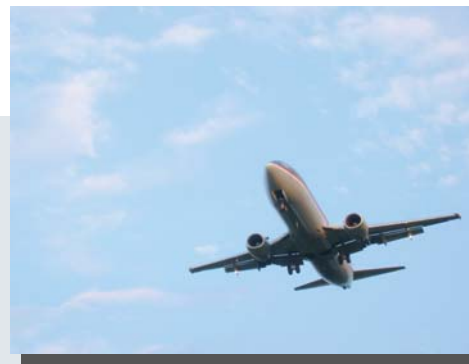

Wouldn't it be best to have this information tied into your existing software systems so that the data is added seamlessly to your other transportation and regulatory information?

If these are your questions, then ChemADVISOR's Transportation Advisor database is your ideal solution.

The Transportation Advisor provides all the information you need to send pertinent shipping instructions with your regulated or potentially regulated substances.

The Transportation Advisor contains the full hazardous materials tables from the U.S. DOT, Canadian TDG, IATA, ICAO, ADR, RID and IMO in a database format. This information includes:

- Proper shipping names
- Synonyms
- Packing groups

The data can be uploaded into other programs, such as ChemADVISOR's ChemSDS+ (M)SDS Authoring Software. It is sold as a set of Microsoft Access tables that can be easily tied into existing software systems by CAS number, proper shipping name, or UN number. The data can also be linked through CAS number/RR number to the information in the LOLI-On-Line database.

E-mail us now for more information on this or any of our other products.
