## GHSAdvisor®

ChemADVISOR has developed GHSAdvisor® to assist you in the determination of a Globally Harmonized System (GHS) classification for your product. The program is based on the UN adopted "Purple Book" allowing you to quickly and easily arrive at a GHS classification. Many countries have already incorporated the contents of the Purple Book into their national legislation. Use GHSAdvisor to comply with these modified requirements. Don't wait. Be prepared.

GHSAdvisor is available as a stand alone product, or we can integrate it with your (M)SDS authoring software.

### HOW IT WORKS

The GHSAdvisor leads you step by step in the classification of your substances, mixtures, and alloys through the use of simple questions about your substances. The program will ask you to supply the necessary information to conduct a classification, or you can directly enter your pre-determined classification results. Alternatively, the program allows you to enter an EU classification which cross references to a GHS classification. The GHSAdvisor can be integrated with the LOLI database to allow you to access the wealth of toxicological and ecotoxicological information that it contains, as well as the most recent suggested classifications from countries and advisory agencies around the world. Based on this information, the GHSAdvisor will suggest the proper classifications and provide the appropriate label elements:

- signal words
- hazard statements
- precautionary measures

### FEATURES

- Intuitive user interface
- Clear report of classification results and label elements
- Ability to directly enter classifications for your products
- Ability to convert EU based classifications into GHS classifications
- Integrated unit conversion calculator
- Ability to integrate with your preferred (M)SDS or label creation software

ChemADVISOR's GHSAdvisor is an easy to use solution for your GHS Classification work.
