

ChemSDS+[®] MSDS Authoring Software

What Is ChemSDS+?

ChemSDS+ is a full featured and flexible (Material) Safety Data Sheet authoring program. Using the numerous features of ChemSDS+, you can create customized (M)SDSs in a variety of styles, languages and output formats. The built-in phrases and regulatory information created by ChemADVISOR allow you to pull the most accurate information into your (M)SDSs with the touch of a button. ChemSDS+ has been designed and used by the experts at ChemADVISOR who prepare thousands of (M)SDSs a year, but it's simple enough to be used by beginning authors writing their first (M)SDS.

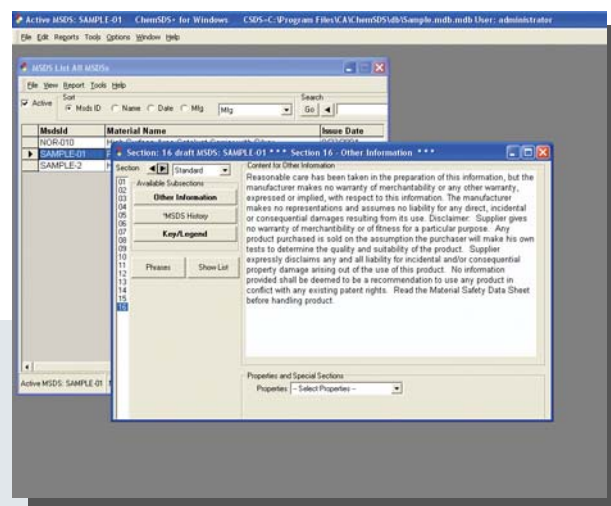

What's Included With ChemSDS+?

THE LOLI REGULATORY DATABASE:

ChemSDS+ features full integration with the LOLI regulatory database. Using this, ChemSDS+ is able to save you time and money by automatically updating your (M)SDSs with current regulatory information.

FULLY CUSTOMIZABLE FORMATS:

You can set up your own look and feel for a (M)SDS. ChemSDS+ allows you to include your company logo, use your own phrases and include the exact regulatory information you desire.

STANDARD PHRASES:

ChemADVISOR offers a standard phrase bank of essential (M)SDS phrases that can be inserted directly into your own (M)SDSs with the click of a mouse. These phrases are sorted by (M)SDS section and sub-section for easy reference. Add your own phrases to the phrase database to create descriptive information pertinent to your product line.

SUPPORT FOR MULTIPLE LANGUAGES:

Our standard phrases are translated into over a dozen major languages. Using the ChemSDS Translation Wizard, you can generate the same document in a variety of languages without having to reenter any information.

CLASSIFICATION ENGINE FOR EUROPEAN UNION SDSs:

ChemSDS+ will look at a product's composition and assist the author in calculating the hazard classification(s) according to the latest adaptations of the EU Dangerous Substance (67/548/EEC) and Dangerous Preparation (1999/45/EC) Directives.

CHEMADVISOR LABELING MODULE:

The ChemSDS+ labeling module allows you to reuse the information from the (M)SDS or to add new information to make a variety of different label documents which can be printed to a file or directly to a printer. You can use one of the ChemADVISOR pre-designed templates to automatically create a European Union, United States or Canadian industrial or consumer label. You can also develop your own templates for labels specific to your company's needs. The ChemSDS+ labeling module can also interact with the ChemSDS+ Translator's Assistant to print label content in multiple languages, even on the same label.

(M)SDS DISTRIBUTION AND MANAGEMENT THROUGH LOTUS NOTES:

ChemSDS+ offers a (M)SDS distribution module which publishes (M)SDSs written with ChemSDS+ to a fully searchable/indexable Lotus Notes document management database. This module can be customized to meet the specific requirements of your Lotus Notes database.

REGULATORY ANALYSIS AND PROPERTY SCRIPTS:

ChemSDS+ provides standard scripts for chemical and physical properties, and regulatory information. User customizable scripts allow for complete control in tailoring which physical and chemical properties and regulatory information appear in the various templates based upon where you market your products.

SUPPORT FOR MULTIPLE (M)SDS TEMPLATES:

Using the templates, data and information can be shown in ANSI, ISO or regional formats. You can also design a custom format specific to your company's needs.

SUPPORT FOR A VARIETY OF OUTPUT FORMATS:

ChemSDS+ can output your (M)SDSs to the screen, a word-processing file or a document suitable for publishing on the Internet or your own intranet.

(M)SDS MANAGEMENT TOOLS:

ChemSDS+ contains tools that allow you to search and organize your information across your entire database of (M)SDSs.
